AUTHOR	Sitts, Maxine K., Ed.
TITLE	The Automation Inventory of Research Libraries, 1988.
INSTITUTION	Association of Research Libraries, Washington, D.C. Office of Management Studies.
REPORT NO	ISBN-0-918006-57-0
PUB DATE	Oct 88
NOTE	183p.; For the 1987 inventory, see ED 296 741.
AVAILABLE FROM	Association of Research Libraries, Office of Management Services, 1527 New Hampshire Avenue, NW, Washington, DC 20036 ($30.00).
PUB TYPE	Reports - Research/Technical (143) -- Tests/Evaluation Instruments (160)
EDRS PRICE	MF01 Plus Postage. PC Not Available from EDRS.
DESCRIPTORS	*Academic Libraries; Databases; Higher Education; *Information Systems; Interlibrary Loans; *Library Automation; *Library Planning; Library Research; Library Statistics; *Library Technical Processes; Online Searching; Online Vendors; *Research Libraries; Tables (Data)
IDENTIFIERS	Association of Research Libraries

ABSTRACT

This inventory provides profiles, tables, and listings describing automated library activities at 117 Association of Research Libraries (ARL) institutions. For the first time, the inventory includes analyses of aggregate information from individual library profiles. The analyses are divided into four categories that reflect primarily bibliographic functions: (1) public access (online catalog, database searching, CD-ROM, public computing, circulation, interlibrary loan, reserves, telefacsimile); (2) technical services (acquisitions, authority control, cataloging/local, cataloging/utility, serials check/claim, serials union list, database conversion, COM catalog, collection development); (3) number of operational and planned functions--1988 and 1987; and (4) computer ownership, public access, and the extent of function for selected functions. Also provided is a detachable page for institutional feedback on the analyses. The report also contains a list of vendors for selected functions; individual library profiles; additional resources on automation; automation inventory contacts for 1988; and an appendix which includes a descriptive factors list, a listing of functions, and the 1988 automated in-house systems listing--a guide for standardized references to in-house systems--and background on the automation inventory. APPENDIX: Survey and Instructions VIII-1

INTRODUCTION

THE EFFECTIVE MANAGEMENT and use of automation to enhance services to scholars and contribute to campus-wide information networks is of major interest to academic and research libraries in 1988. In contrast to earlier days of automation, when attention was focused on internal processing functions, academic libraries today are applying their technological skills to enhancing public access and creating innovative automated services to assist users within and outside the library walls.

In 1988, nearly all libraries participating in this inventory provide public access to their online catalogs through dial-up services or local- or wide-area networks. Nearly 18,000 access points to 113 online catalogs are reported, including one system of 4,000 workstations. Almost 1700 terminals are being used for database searching, mostly within library buildings. At the same time, 92 libraries are providing about 600 CD-ROM units for public use, and 72 libraries are operating public computing facilities.

While automation is firmly in place, there also are continuing upgrades and modifications as newer capabilities are implemented. Looking at some 1766 automated activities reported by 117 libraries:

* **78 percent** are operational

* **12 percent** are being planned

* **5 percent** are being purchased, tested, or implemented

* **3 percent** are being modified or upgraded

* **2 percent** have been completed or discontinued

THIS FOURTH ANNUAL Automation Inventory of Research Libraries - 1988, provides analyses and profiles of the state of automation in 117 academic and research libraries in the U.S. and Canada. New this year are introductory analyses of library automation trends based on the Inventory. The publication also includes individual profiles of automation at each participating library.

The Inventory is designed to be helpful to a diverse readership, from administrators needing an overview of automation issues and trends, to committees involved in planning and modifying systems, to systems librarians searching for specific examples of automation applications. Throughout its development, the Inventory has been designed to respond to the most frequently-asked questions concerning library automation.

Since automated systems can be radically different, each library's profile -- or picture -- is based on its own automation configuration. The Inventory does not try to fit a library's automation into an overall scheme for comparison and contrast. Information comes from each library's Automation Contact -- usually a member of the systems staff who is familiar with the current and upcoming automation activities at the institution. For this year's **Inventory,** Automation Contacts updated their libraries' worksheets (based on last year's **Inventory**) during Summer 1988.

Most libraries know The Automation Inventory of Research Libraries as an annual publication. Another important use of the Inventory is as a searchable descriptive database. At any time, Office of Management Services staff can provide an individual or library with a tailored search of the Inventory according to specific parameters established by the requestor.

The Inventory has been maintained by the Office of Management Services' Systems and Procedures Exchange Center (SPEC) over the past four years, following two years of testing. The complete database of information is available for searching throughout the year. Recognizing that library technology is ever-changing, ARL members are encouraged to report changes as they occur, so that the database remains up to date.

THE INVENTORY AT A GLANCE

The Inventory contains information:

About: **19** functions

According To: **6** descriptive elements

From: **117** libraries

Functions are dropped and added as technologies change. Libraries are instructed to report on automation that is an administrative responsibility of the library or that is in the library's budget. For additional information, see the APPENDIX.

  BRANCHES (library and branches)
  CAMPUS-WIDE (includes above)
  MULTI-INSTITUTION (includes above)

3. ***COMPUTER OWNERSHIP/USE***
    DEDICATED COMPUTER
    SHARED COMPUTER

4. ***PUBLIC ACCESS***
    ON-SITE IN LIBRARIES ONLY (main and/or branches)
    DIAL-UP ACCESS (includes above)
    LOCAL AREA NETWORK ACCESS (includes above)

5. ***NUMBER OF WORKSTATIONS*** *supporting the function.*

6. ***NAME OF VENDOR***

--Many libraries also include ***ADDITIONAL COMMENTS*** *in their profiles.*

117 LIBRARIES

Participants in the Automation Inventory are members of the Association of Research Libraries (ARL), a non-profit educational organization of 118 major research libraries in the United States and Canada.* Its membership includes 106 large university libraries, five national libraries, four special libraries, and three public libraries.

ARL libraries are characterized by their extensive collections on many subjects and in many languages. For 56 years, ARL members have recognized a unique responsibility to develop comprehensive collections for the benefit of scholars, and have sought to support the work of the research community through cooperative action.

---

*Boston Public Library is the only non-participant in the Automation Inventory.

ANALYSIS

For the first time, the Inventory includes some analysis of aggregate information from individual library profiles. Two librarians who have worked extensively with automation at their home institutions and who have written on this subject were invited to see what the Inventory database would reveal about trends.

Both discovered from this test that there is much to be learned from the data; the deadline for this publication prevented them from completing all the analyses they could have done. The following reports provide examples of how the Inventory data can be used to draw conclusions about the status of automation in research libraries and to look at trends over time.

In approaching the analysis, the librarians divided the project into two parts, Public Access and Technical Services, and then decided to deal almost entirely with bibliographic functions, leaving aside administrative functions and those functions with low response rates. The division of functions is as follows:

PUBLIC ACCESS
- (Arnold Hirshon)
Online Catalog
Database Searching
CD-ROM
Public Computing
Circulation
Interlibrary Loan
Reserves
Telefacsimile

TECHNICAL SERVICES
- (Emily Gallup Fayen)
Acquisitions
Authority Control
Cataloging/Local
Cataloging/Utility
Serials Check/Claim
Serials Union List
Database Conversion
COM Catalog
Collection Development

The final five pages in the analysis provide a few overall statistics: The total number of operational and planned functions reported by libraries for 1987 and 1988; and the Extent of Function, Computer Ownership and Public Access for Selected Functions in 1988.

The analysis covers two years worth of data (1987, 1988) and has been kept straightforward for this first effort. Based on the learnings this year, we will be making some simple changes to the Inventory in 1989, to provide even more workable data for analysis next year.

We invite readers to provide their ideas at the end of this section. We also encourage you to request searches of the database and to obtain the disk, if you'd like to further analyze the data yourself. (Although the Inventory is maintained in Reflex, the two analysts each used a different software package: Symphony and Q&A. Other formats also are available.)

PUBLIC ACCESS

ANALYZED BY: Arnold Hirshon

Arnold Hirshon is the Associate Director for Library Collections and Access Services at Virginia Commonwealth University. He has written and spoken extensively on automation issues, and was the compiler of SPEC Kit 90 (Integrated Library Information Systems in ARL Libraries) and SPEC Kit 126 (Automated Library Systems in ARL Libraries).

PUBLIC ACCESS FUNCTIONS

ONLINE CATALOG

Systems Reported. Although the number of systems reported did not change, there was a substantial increase in the number of online catalogs reported as operational from 1987 (from 67% to 78%).

The most used system in 1988 was NOTIS (at 36 sites). 70% of NOTIS customers reported the online catalog (OC) being in operation. The next highest was GEAC (19 sites), with 84% of the GEAC sites operational.

Of the systems with a large number of sites, NOTIS had the largest increase in customers from 1987 (44%), followed by Carlyle (TOMUS) with 20%. Of the systems with the largest installations, the largest decrease was for GEAC (down by 9.5%). Even larger decreases were noted for locally developed systems (down by 16.7%), WLN/BLIS (40%), and OCLC LS2 (formerly ALIS II, down 100%).

The following is a table of those online catalogs reported in 1987 or 1988 that had more than one site. The table indicates the number and percentage of systems reported as operational. The order is by most reported systems in 1988. Local systems are omitted.

	Total 1988	Oper. 1988	% oper. 1988	Total 1987	Oper. 1987	% oper. 1987	% inc/dec. Total
NOTIS	36	25	69.4%	25	16	64.0%	44.0%
GEAC	19	16	84.2%	21	16	76.2%	-9.5%
None Re	7	2	28.6%	14	1	7.1%	-50.0%
Carlyle	6	5	83.3%	5	4	80.0%	20.0%
DLA	5	5	100.0%	5	5	100.0%	0.0%
VTLS	4	3	75.0%	4	3	75.0%	0.0%
DOBIS	3	2	66.7%	3	2	66.7%	0.0%
LCS	3	3	100.0%	3	3	100.0%	0.0%
TRLN	3	3	100.0%	3	3	100.0%	0.0%
WLN/BLIS	3	3	100.0%	5	3	60.0%	-40.0%
CARL	2	2	100.0%	2	2	100.0%	0.0%
Innov.Int.	2	2	100.0%	0	0	0.0%	0.0%
LDMS	2	2	100.0%	1	1	100.0%	100.0%
Total This Group	95	73	76.8%	91	59	64.8%	
Total All ARL To Report This Function	113	89	78.8%	113	75	66.3%	

System Status. Online catalogs are clearly now the norm in ARL libraries. In 1988, 79% of all online catalogs were reported as operational, an increase of 19% over 1987. 68% of the libraries moved from the planning to the operational stage.

Number of Terminals. The number of terminals reported generally was defined as those that were under the management and or budgetary control of the library. Although there was some inconsistencies in what reported libraries included in their report of the number terminals in use (some libraries included only terminals in library buildings while others included the total number of terminals on the university network), the average number of terminals for 1988 was 157 per operational site. This is an increase of 14.5% over 1987.

Networking. The ratios stayed approximately the same between 1987 and 1988 of libraries reporting onsite terminals as opposed to dial-up terminals or terminals on a university local area network. The number of LANs increased by 8% and dialup access increased by 13%.

Hardware. The percentage of shared computers is up dramatically (25%) over last year, while the percentage of dedicated computers is down. Dedicated computers are still dominant, comprising 61% of the total in 1988.

Extent of Online Catalog Locations. Online catalogs were widely available throughout the university community in 1988. 65% of libraries reported that the system is available either campuswide or as a multi-insitutional catalog. An additional 26% noted that the catalog was available in some branch libraries. Only 9% indicated that the catalog is available in the library only. Very similar percentages were reported for 1987.

DATABASE SEARCHING

System Status. 115 libraries reported that they provided some mechanism for database searching, with 112 operational, 2 modifying, and 1 planned. See also CD ROM.

Number of Terminals. Of the libraries that were operational, 31 libraries reported having fewer than 5 terminals, 75 reported having more than 5. Only 9 libraries had more than 30 terminals, of those five had more than 100. Of the ones with over 100, however, there were some mitigating factors (such as including CD-ROM devices, including the availability of BRS on an inhouse IBM, and duplicate count of terminals reported elsewhere. The total number of terminals used for database searching for all libraries was 1,697, and the average was 14.75.

CD-ROM

This was a new category in 1988, and therefore no comparative data with 1987 is possible.

System Status. 92 libraries reported having CD ROM available. Of those, 82 (89%) were operational, 6 planned, 1 modifying, 1 testing.

Hardware Configuration. No consistent definition of type of hardware was applied by the libraries, however 62 libraries indicated that they used dedicated hardware.

Number of Terminals. The average number of stations for operational libraries was 7, and the total number of terminals for all operational libraries was 535.

PUBLIC COMPUTING

System Status. 72 libraries reported having public computing centers (up from 68 in 1987), of which 61 (84.7%) were operational (56 in 1987), and 9 were planned, or being upgraded or modified (11 in 1987).

Hardware Configuration. Of the 72, 39 use dedicated equipment, 15 use shared, and the others did not not report.

Number of Terminals. The maximum number of terminals was 2,000 at MIT, with the next highest being 257 at Michigan). The average number of terminals at operational locations was 168. The average number of terminals was 79 at all locations with dedicated equipment, however this average is skewed by the 2,000 reported by MIT.

CIRCULATION-RELATED FUNCTIONS

CIRCULATION

System Status. 112 libraries reported using this function, with 72% operational. This compares to 111 libraries reporting in 1987, with 69% operational.

Systems Reported. The most named system in 1988 was NOTIS, overtaking last year's top system (GEAC). However, only 54.% of NOTIS sites were reported as operational, compared to 84% for GEAC. Nonetheless, NOTIS realized a 47% gain in customers, while GEAC was reported to show a loss of 4%.

Of the other named currently marketed systems with an appreciable number of sites CLSI lost 22% customers from last year. and VTLS gained one customer. One other system, Innovative Interfaces, gained two new customers (in 1987 there were none).

The following is a table of those online catalogs reported in 1987 or 1988 that had more than one site. The table indicates the number and percentage of systems reported as operational. The order is by most reported systems in 1988. Local systems are omitted.

	CIRC ALL 88	CIRC OP 88	% oper. 1988	CIRC ALL 87	CIRC OP 87	% oper. 1987	% inc/dec Total
NOTIS	28	15	53.6%	19	8	42.1%	47.4%
GEAC	25	21	84.0%	26	21	80.8%	-3.8%
None Re	10	6	60.0%	15	8	53.3%	-33.3%
CLSI	7	6	85.7%	9	8	88.9%	-22.2%
LS/2	4	3	75.0%	5	3	60.0%	-20.0%
VTLS	4	2	50.0%	4	2	50.0%	0.0%
LCS	3	3	100.0%	3	3	100.0%	0.0%
TRLN	3	0	0.0%	3	0	0.0%	0.0%
CARL	2	2	100.0%	2	2	100.0%	0.0%
Innov.Int.	2	1	50.0%	0	0	0.0%	0.0%
Total This Group	88	59	67.0%	86	55	64.0%	
Total All ARL To Report This Function	112	81	72.3%	111	77	69.4%	

Circulation and Online Catalogs: Comparison. Based upon the data of operational, modified and upgrading systems, it is probable that libraries in 1988 have begun to place a higher priority on implementing the online catalog than on implementing circulation systems. While 82% of the sites in 1988 have online catalogs that are operational or being modified or upgraded, only 78% have circulation systems with these statuses. This is all the more significant because it reverses the situation in 1987 when more circulation systems (77%) had one of these statuses than online catalogs (74%).

70 libraries reported using the same vendor for both the online catalog and the circulation system; 43 libraries used different systems. The two systems with the most libraries operational were NOTIS and GEAC.

> Of those using NOTIS for the online catalog, 11 libraries used a different system for circulation. Of those using NOTIS for circulation, only 2 used a different system for the online catalog. 25 libraries used NOTIS for both functions (up from 17 libraries in 1987).
>
> No libraries that used GEAC for the online catalog used a different system for circulation, but 5 libraries that used GEAC for circulation used a different system for the online catalog. 19 libraries used GEAC for both functions (down from 21 in 1987).

INTERLIBRARY LOAN

System Status. Of 115 reporting libraries, 108 (94%) had operational systems, 5 (4%) were planned and 1 was modifying.

Systems Reported. The two major systems in use were, obviously, OCLC and RLIN. Of operational systems, 76% used OCLC, with 45% using only OCLC and 21% using OCLC in conjunction with RLIN. 7% of all sites used RLIN only. The only other system that received substantial use was a Canadian system, ENVOY, reported to be operational by 5.5% of the libraries.

Terminals. The total number of terminals reported for ILL (397) is probably high. Probably at least some of the libraries reported all of their OCLC, RLIN or other terminals, regardless of the actual function for which the terminal is used. Of the 397 terminals reported for the 108 operational libraries, five libraries reported having a combined total of 150 of these terminals for ILL. For the remaining 103 libraries, the average number of terminals per institution for ILL was 2.4.

RESERVES

There were 105 libraries that reported, with 53 (51%) operational. The system most in use was GEAC with 20 sites. The most dominant site with libraries that are in the planning stage or undergoing implementation was NOTIS with 21 sites. The most dominant system (regardless of operational status were both GEAC and NOTIS, with 25 sites each.

TELEFACSIMILE

The use of telefacsimile is greatly expanded since 1987, with a 33% growth rate (from 48 to 64 libraries). Of these, 54 libraries were operational in 1988 (up by 39%) with a total of 88 machines (up by 76%).

One reason for telefax might be the need to communicate across multi-institutional settings. The maximum number of machines reported by one institution was at Indiana University, with 8 terminals used in a multilibrary setting. 14 institutions that are now using or planning to use telefax were involved in multi-institution settings (12 operational, 2 planned). Where the average number of machines per institution generally was 2, the average number for multi-institution reports was 4.

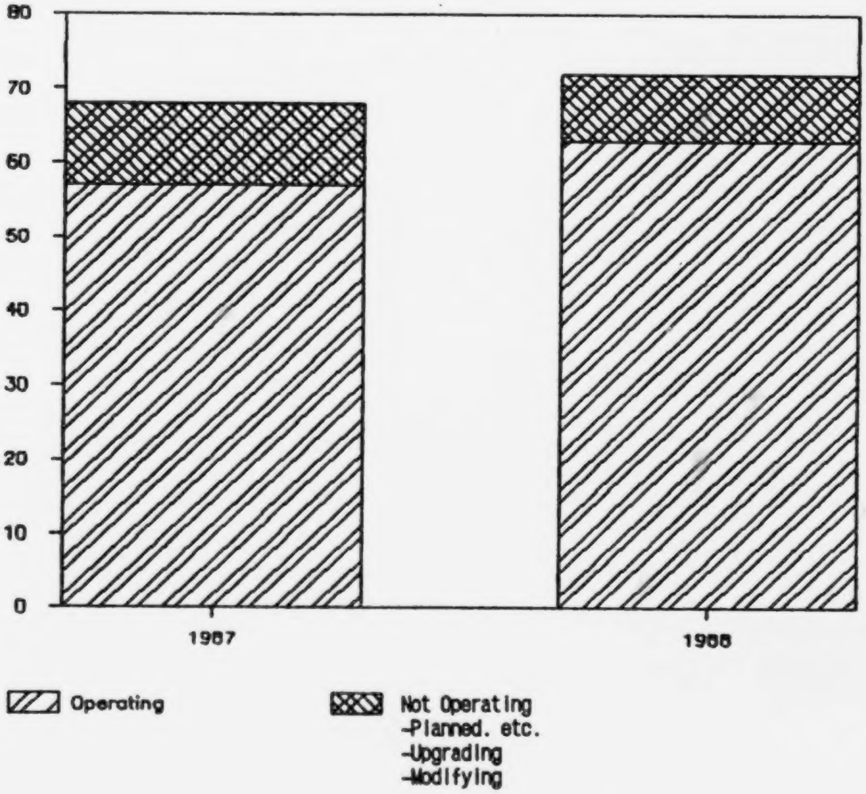
PUBLIC COMPUTING: 1987 and 1988



TECHNICAL SERVICES

ANALYZED BY: Emily Fayen

Emily Gallup Fayen is Director of Library Systems at the University of Pennsylvania. She is the author of several books and numerous articles. Two recent works covered the online catalog and library circulation systems.

TECHNICAL SERVICES FUNCTIONS

The information on activities in technical services reported by the ARL libraries is especially difficult to analyze because in many instances, more than one vendor is used to support a particular function. Consequently, tallies of the status of functions by vendor, for example, give total figures exceeding the number of institutions reporting. The following data for 1988 attempt to correct for these problems where possible.

In addition, three transitional status values were combined in a category which I have renamed "Coming Up". This new category includes Purchased, Implementing, Modifying, and Testing.

The Technical Services functions have been automated the longest, so there is less change from year to year than for some of the newly automated Public Services activities. However, as the field matures, some Technical Services functions are slowly being phased out.

ACQUISITIONS

There was very little change in the number of institutions reporting operational Acquisitions Systems. 74 institutions reported their status as Operational for 1988.

NOTIS was the most frequently used vendor (24%), followed by GEAC (14%) and Innovacq (13%). RLIN, OCLC, and Local systems are also widely used.

AUTHORITY CONTROL

There was very little change in the number of institutions reporting operational Authority Control systems as well. 49 institutions reported their status as Operational for 1988.

NOTIS was the most frequently used vendor (23%), followed by GEAC (11%).

CATALOGING (LOCAL)

Local cataloging has seen a rise from 58 institutions reporting Operational status in 1987 to 65 in 1988-- a 12% rise. The most frequently used vendor is NOTIS (23%) followed closely by GEAC (16%). Local systems (6%) are the next most often used.

CATALOGING (UTILITY)

Virtually all (over 95%) of institutions reporting are using one or more of the bibliographic utilities for Cataloging. OCLC is the leader with 60% followed by RLIN (25%) and UTLAS (8%). Several institutions use more than one vendor. 4% are using locally developed systems and 1% are using none.

SERIALS CHECK IN

Institutions reporting Serials Check-In as operational have increased from 42 in 1987 to 47 in 1988. In addition, 33 institutions report plans for Serials Check-In. One institution reports discontinuing this function.

NOTIS is the most frequently used vendor (26%) followed by Faxon (12%), GEAC (10%0, Innovacq (9%), and VTLS (3%).

SERIALS UNION LIST

Institutions reporting Operational Serials Union List functions dropped from 72 in 1987 to 67 in 1988, a 7% decrease. In addition, seven institutions reported discontinuing this function.

OCLC leads the vendors with 19%, followed by NOTIS (9%), Local (9%), and GEAC (5%).

DATABASE CONVERSION

Institutions reporting Operational as the status of their Database Conversion efforts also decreased from 76 in 1987 to 73 in 1988, a 4% decrease. Seven institutions reported discontinuing this function.

Vendors are OCLC (36%), RLIN (8%), UTLAS (5%), NOTIS (3%). 11% use a variety of other sources.

COM CATALOG

Institutions reporting Operational COM catalogs dropped from 37 in 1987 to 31 in 1988, a 19% drop. In addition, 10 institutions report discontinuing this function.

Vendors supporting COM catalogs in 1988 are UTLAS (10%), Local (8%), and GEAC (6%). Others combine for a total of 26%.

COLLECTION DEVELOPMENT

53 institutions report Operational Collection Development activities, a 26% increase over the 42 institutions reporting this function as Operational in 1987. In addition, 11 institutions report that they plan to automate this function.

RLIN leads the vendors reported at 14%, followed by OCLC (8%), NOTIS (8%) GEAC (4%), and Innovacq (3%). Others combine for 10%.

Several institutions use more than one vendor.

EXTENT OF AUTOMATION

The two last charts compare the extent of library automation in 1987 and 1988. The bar charts show the number of functions (or modules) whose status was given as Operational by each institution in 1987 and in 1988. The other two charts show the number of functions whose status was given as Planned in 1987 and in 1988.

The graphs show that there has been a slight shift in the number of functions actually operational, and consequently a decrease in the number of functions that are planned in the future.

COMMENTS FOR: California, Los Angeles (12)

ORION, UCLA library's locally developed online information system, runs on the Office of Academic Computing IBM 3090 under MVS-XA and TSO. ORION currently includes acquisitions, fund accounting, serials processing, bindery, catalog maintenance, linked authority control, and circulation/inventory control modules in an integrated system with public access. In 8/88, the database included circa 2.5 million bibliographic and 2.7 million authority records. In addition to 87 ORION public access terminals, 47 terminals provide user access to the MELVYL database, UC's union catalog. In addition, 20 ORION terminals are used at reference desks. Catalog editing and maintenance is done on ORION which includes a linked authority control system. ORION is used in al UCLA campus libraries. Local Extent is for Library and branches. Local off-campus institutions such as the UC Irvine Library and Getty Center Library have established ORION private databases that operate on the UCLA mainframe. In addition, many institutions in the LA area have established search-only dial-access accounts. The 163 Administrative Wkstations include 23 dedicated to systems development work (ORION and administrative applications) and 140 PCs located in all campus libraries.

COMMENTS FOR: California, San Diego, University of (14)

Administrative, LNET is a Novell network of PC workstations on Ethernet. There are three file servers and 70 workstations for electronic mail, word processing, and other applications.
INNOPAC is being implemented this year for cataloging and circulation with minimal OPAC function. Next year INNOPAC will be the full local catalog. MELVYL will be UC union catalog and will supplement/backup INNOPAC.
FAX machines Canon L920, 350 and OMNIFAX G35.

COMMENTS FOR: Houston, University of (36)

Building on existing services, University Libraries are expanding end-user access to electronic information resources and bibliographic databases. The Libraries are establishing an Electronic Information Center, which will initially house 12 CD-ROM reference databases on 9 workstations and 2 searching workstations for access to BRS After Dark and Knowledge Index. A Bibliographic Information Center is also planned, which will house 18 GEAC terminals, 6 CD-ROM online union catalogs for the Houston Area Research Library Consortium, and 2 OCLC New Systems Reference Service workstations. Fourteen new workstations intended for these projects are included in reported totals. Not shown- 4 workstations that run locally-developed Information Machine program, which presents orientation information about library research strategies, services, systems, materials, policies, and facilities. An expert system to assist users in selecting appropriate indexes is currently being developed.

COMMENTS FOR: Louisiana State University (47)

Database Conversion, inhouse record transfer from OCLC.
"Public Access" is interpreted as access to the information, not to the function.
Number of wkstations for NOTIS-related functions refers to those owned by the library and used inhouse. The system is available on campus to over 200 terminals.

Database Searching, BRS, Dialog, Artfl, Questel, Dow Jones
Reference, ready reference searching done on variety of databases. Some searching done through RLIN gateway, rest done directly on PCs.
Serials Check/Claim, Access now available on selected OPAC terminals at Reference desks.
CD-ROM, Wilson: GP Govt. Publications Index, PAIS, and Lib. Cong. Subject Headings planned-3 wkstations, dedicated status in library.
Serials/Union List, have ceased producing a printed list from database on University mainframe. Are incorporating all serial records into OPAC.
LAW LIBRARY information also provided by NYU, based on INNOV. Not included in 1988 Automation Inventory listings. Call SPEC if interested.

COMMENTS FOR: North Carolina, University of (62)

Public Computing, wkstations include 3 dedicated to MRDF collection.
Acquisitions, Law Lib. currently uses OCLC subsystem; Health Sci. Lib. uses Perline.
Serials Check/Claim, Main Lib. has access to Faxon's DataLinx; Health Sci. Lib. uses Perline.
Circulation, TRLN system in development.
TRLN=Triangle Research Libraries Network, a cooperative project sponsored by Duke Univ., North Carolina State, and Univ. of North Carolina, Chapel Hill.
This report reflects sytems activities in the Academic Affairs Libraries, the Health Sciences Library and Law Library. It does not reflect stand-alone operations conducted on over 50 microcomputers used by library staff to support library activities. The libraries also provide space for several public computing facilities, comprising over 30 workstations, and operated by UNC Microcomputing Support Center.

COMMENTS FOR: Rice University (76)

Database Searching, end-user searching done in library only.
Telefacsimile, public can use fax for a fee.
Circulation, included in public catalog.
Cataloging/Utility, onsite, in reference office.
CD-ROM, Infotrac & Cambridge share 1 wkstation; Bibliofile & MARCIVE-GPO share 1 wkstation. MARCIVE-GPO is test disk of a product Marcive has begun marketing.
Acquisitions, serials check-in, and circulation information are all available in the public catalog which is itself available on a dial-in basis as well as onsite. We are putting our dedicated computer on our campus network this fall.

COMMENTS FOR: Rochester, University of (77)

Administrative, 2 Zenith Z181 Laptop for loan.
Public Computing, Carlson Science & Engineering Library 15 new PCs. Facility renovated this year.
Circulation, Carlson and Rish Rhees Central Libs. operational. Edward G. Miner Medical Lib. scheduled for July 88.
Reserve Room, Scheduled for Aug. 88.
Cataloging/Utility, dialup access, 1 public access PC.
CD-ROM, most running on IBM PCs. About 15 wkstations. Numerous CD-ROM applications in library plus others in reference depts. and branches. Include indexes, abstracts, ERIC, InfoTrak, Encyclopedia, Manual of Style, etc. All except one are public access in microcomputer lab.
FAX, UR Libs. also have access but will be adding own machines in early 89. Also plan to add machines to convert text to digital form (OCRs). We are testing for selection.
UR is on NY State Interlibrary Communication System (NYSIL) for ILL. We use Tandy Radio Shack equip. We have added switch for NY State Educational Network (NYSERNET).
In 1987, we installed GEAC Concept 9000 main computer and expect to have all functions migrated to it by early 1989.

COMMENTS FOR: National Library of Canada (113)

Administrative, includes 3 LANs comprising more than 114 wkstations.
Collection Development, covers NLC developed Canadian Conspectus.
Database Searching, access to 26 systems and some 400 databases
Cataloging/Local, 10 terminals dedicated to MINISIS System.
DOBIS System used by NLC is Canadian Federal Government Version, not IBM.
COM Catalog, used as back-up only to DOBIS online catalogue.
Online Catalog, online cataloguing function is available from any DOBIS terminal.
Workstation count here covers only terminals in public services areas.

ADDITIONAL RESOURCES ON AUTOMATION

SPEC KITS (SYSTEMS AND PROCEDURES EXCHANGE CENTER):

Remote Access to Online Catalogs	(#142, March 1988)
Systems Office Organization	(#128, October 1986)
Automated Library Systems	(#126, July-August 1986)
Technical Services Cost Studies	(#125, June 1986)
Barcoding of Collections	(#124, May 1986)
End User Searching Services	(#122, March 1986)
Bibliographic Instruction	(#121, February 1986)

SPEC Kits are available mainly by subscription. Individual issues cost $20.00 ($10.00/ARL members).

BACK ISSUES OF AUTOMATION INVENTORY

BACK ISSUES of the 1985, 1986, and 1987 Automation Inventory are available for $20.00 each:

1985 Inventory	Publication PB07
1986 Inventory	Publication PB10
1987 Inventory	Publication PB12

PREPAYMENT IS REQUIRED for all publication orders. Price includes library rate postage in US. Add $5 in US for first-class postage and handling. For orders to Canada, add $5 for postage/handling; for orders to all other countries, add $8.50. Order by title and number from: SPEC/Office of Management Services. Association of Research Libraries, 1527 New Hampshire Ave., N.W., Washington, D.C. 20036.

SEARCHES

Information in the Automation Inventory database is constantly updated. The database is maintained inhouse using REFLEX software, which is transportable to many spreadsheet formats, including LOTUS. Floppy disks for the MS/DOS environment are available for $25.00. Assistance in using the database is available for an hourly consulting fee. Searches of the database also are available at the following fee schedule:

	ARL LIBRARIES	NON-ARL LIBRARIES
MINIMUM CHARGE	$20.00	$40.00
COMPLEX SEARCHES	$25.00-$100.00	$50.00-$200.00

Contact SPEC at the above address, or call (202) 232-8656.

APPENDIX: Survey and Instructions

THE AUTOMATION INVENTORY

1988 AUTOMATION INVENTORY UPDATE PROFILE:

This package contains:

Your library's profile

Descriptive Factors List

Listing of Functions

1988 Automated Inhouse Systems Listing

Background on the Automation Inventory

The profile is arranged in the same order as your library's COMPLETE PROFILE in the 1987 Automation Inventory.

For information that has not changed, simply CIRCLE the correct information in the 1987 rows.

For information that has changed, or that is missing, WRITE the updated information on the lines provided in the 1988 rows. **To learn what choices are available for each descriptive factor along the top (e.g., operating status, computer status), refer to the attached DESCRIPTIVE FACTORS list.**

To verify that your library has reported on ALL its automated functions, refer to the attached LISTING OF FUNCTIONS, since your library may not have provided information on all its functions in 1987. Enter additional functions at the end of the profile, after CD-ROM -- a new function for 1988.

Questions? Contact Maxine Sitts at (202)232-8656,
FAX (202)462-7849, or ALANET ID ALA0913.

RETURN BY JULY 15, 1988 TO:

1988 Automation Inventory Update
SPEC/Office of Management Services
Association of Research Libraries
1527 New Hampshire Ave. NW
Washington, DC 20036

THE AUTOMATION INVENTORY

DESCRIPTIVE FACTORS LIST

To provide a profile of the extent and nature of automation, libraries describe each of the functions, where applicable, according to the following factors:

NAME OF VENDOR or NETWORK/UTILITY
Suggested acronyms can be found in the 1988 Automated Inhouse Systems Listing. You also can provide names of locally-developed systems, usually with explanations in the COMMENTS section.

OPERATING STATUS
PLANNING, PURCHASING, TESTING, IMPLEMENTING
OPERATING
MODIFYING, UPGRADING

NUMBER OF WORKSTATIONS
This number is meant to provide an indication of the workstations that normally are used to support the function. Since many multi-use workstations will be reported for more than one function, the numbers for each library cannot be totalled.

COMPUTER STATUS
DEDICATED COMPUTER
SHARED COMPUTER

EXTENT OF FUNCTION
LIBRARY (in main library only)
BRANCHES (library and branches)
CAMPUS-WIDE (includes above)
MULTI-INSTITUTION (includes above)

PUBLIC ACCESS (Where Applicable -- Not all functions apply.)
ON-SITE IN LIBRARIES ONLY (main and/or branches)
DIAL-UP ACCESS (includes above)
LOCAL AREA NETWORK ACCESS (includes above)

COMMENTS
Additional information that respondents judge useful for other academic and research libraries using this database. Respondents are encouraged to provide information on additional automated functions not included in the worksheet, or comments regarding exceptions to or explanations of responses. Attach additional pages, if you wish.

THE AUTOMATION INVENTORY

LISTING OF FUNCTIONS

The Inventory describes automation that is an administrative responsibility of the library or included in the library's budget.

Functions include commonly-performed library activities that are either directly supported by specific automated modules/systems (e.g., acquisitions), or that are indirectly supported by the library's choice to devote automated support to the function (e.g., reference, collection development).

When a function is open to interpretation as to an exact definition (e.g., "Reference,"), each library uses its own interpretation in responding to the Inventory -- the interpretation that best describes how the library is using its automated resources.

Eighteen functions were explored in the 1987 Inventory.

IF YOUR LIBRARY REPORTED "NONE" FOR ANY OF THE FUNCTIONS BELOW, THEY ARE NOT INCLUDED IN YOUR PROFILE.

ADD FUNCTIONS THAT YOU HAVE AUTOMATED SINCE THE 1987 INVENTORY ON THE LINES PROVIDED AT THE END OF YOUR ATTACHED PROFILE

Acquisitions
Serials Check/Claim
Serials/Union List
Authority Control
Cataloging/Utility
Cataloging/Local
Circulation
Reserve Room
COM Catalog
Online Catalog
Database Searching
Collection Development
Interlibrary Loan
Telefacsimile
Public Computing
Administrative
Database Conversion
Reference

In addition to these functions, the 1988 Inventory adds CD-ROM.

THE AUTOMATION INVENTORY

1988 AUTOMATED INHOUSE SYSTEMS LISTING
A GUIDE FOR STANDARDIZED REFERENCES TO INHOUSE SYSTEMS

Listed below are some of the major inhouse systems used by libraries for both multi-function integrated automated library systems and and single-function systems. This listing is intended as a guide for standardized references within the Automation Inventory. If your library uses systems not listed below, please provide their full names, and we will add them to the list next year.

ADLIB	Advanced Library Concepts
ALIS III	UTLAS
ATLAS	Data Research Associates
BACS	Bibliographic Access & Control Systems, Washington University
BLIS	Biblio-techniques Library and Information System (no longer marketed)
BOOKLINE	Blackwell automated acquisitions (no longer marketed)
CARL	Colorado Alliance of Research Libraries System
Checkmate	CLASS automated serials control system
CLSI	CL Systems Inc.
DOBIS	IBM
DYNIX	Dynix Integrated Library System
EBSCO	Serial Control System (online serials check-in)
GEAC	GEAC Library Information System
ILS	Georgetown Univ. Medical Center Library Information System
INNOV	Innovative Interfaces systems, including INNOVACQ
LIAS	Pennsylvania State System
LIBS 100	CL Systems Inc.
LINX	Faxon
LS/2	OCLC (formerly ALIS II-Data Phase)
LS/2000	OCLC local library automation
NOTIS	Northwestern Online Total Integrated System
OCLC	Serial Control subsystem (phasing-out)
PERLINE	Blackwell automated serials control
SC-10	Faxon online serials check-in facility
TOMUS	Carlyle Systems
VTLS	Virginia Tech Library System
WLN	Washington/Western Library Network inhouse software

THE AUTOMATION INVENTORY

BACKGROUND ON THE AUTOMATION INVENTORY

Although most librarians may think of the Automation Inventory as a publication, its real value lies in its ability to provide a current descriptive profile of ARL member library activities in the area of automation.

The Inventory has been maintained by SPEC over the past three years -- after two years of testing -- to respond to the most frequently asked questions concerning research library automation. The information is structured to be helpful to diverse needs, from administrators needing an overview of trends, to systems librarians looking for specific examples of vendors and automation applications.

Information for the database comes from each ARL member's Automation Contact, usually a member of the systems staff familiar with both the current and planned automation at the institution. In 1987, the Inventory contained details about 18 functions according to six descriptive elements. In the upcoming 1988 version, one function -- CD-ROM -- has been added.

The Inventory remains available for tailored searches as an information service of SPEC. It also is available on floppy disk.
